IDAHO AUTO INSURANCE PROGRAM
STATE FARM INSURANCE COMPANIES

Filing Memorandum

January 2, 2026 for New Business, March 10, 2026 for Renewal Business

Our last implemented rate change in Idaho was effective February 3, 2025 for New and Renewal Business and produced a -2.2% all coverages change to State Farm Mutual and a 0.0% all coverages change to State Farm Fire and Casualty.

This filing includes, for Personal Vehicles, an overall statewide average change of -9.7% to State Farm Mutual and -2.1% to State Farm Fire and Casualty. The enhancements to the private passenger auto rating plan include revisions to base rates, factors, rules and pricing models.

In addition to enhancements that better match price to risk, the rating plan changes support an overarching goal of modernizing our systems and business processes. This includes simplified rating rules that will improve the experience for customers, agents and operations personnel. Long term, the gain in operational efficiency will help manage overall expense costs for State Farm policyholders while at the same time continue to allow for a competitively priced product.

The following provides the details and support of the statewide overall average percentage rate changes as well as the revisions to the rating plan. The changes by coverage for the period that rates will be in effect for Private Passenger vehicle types are summarized in the tables below:

State Farm Mutual		
Coverage	**Vehicle Type**	**Revised % Change**
Bodily Injury Liability	Private Passenger	1.5%
Property Damage Liability	Private Passenger	2.0%
Medical Payments	Private Passenger	-2.0%
Comprehensive	Private Passenger	-13.0%
Collision	Private Passenger	-28.0%
All Coverages	Private Passenger	-10.2%

The automobile insurance program in State Farm Fire and Casualty was established a number of years ago to accommodate risks which are not eligible for insurance in the parent Mutual Company.

Due to the relatively small volume of auto business written in State Farm Fire and Casualty Company, the base rates are established as a percentage of the corresponding Mutual Company base rates.

The changes described in this filing result in the following income effects for the period that rates will be in effect for Private Passenger vehicle types:

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

State Farm Fire and Casualty		
Coverage	**Vehicle Type**	**Revised % Change**
Bodily Injury Liability	Private Passenger	2.0%
Property Damage Liability	Private Passenger	4.0%
Medical Payments	Private Passenger	-12.0%
Comprehensive	Private Passenger	4.0%
Collision	Private Passenger	-12.5%
All Coverages	Private Passenger	-2.2%

Additionally, please see the corresponding policy forms filing (SERFF # SFMA-134341740), which includes the introduction of a multiple car policy. There are no rating impacts associated with the policy form filing.

A. INDICATED RATE CHANGES

The enclosed Exhibits 1-17 set forth the actuarial calculation of the State Farm Mutual and State Farm Fire and Casualty indicated private passenger rate level changes by coverage, as well as for all coverages combined. The indicated rate level change for all coverages combined is -2.6% for State Farm Mutual as shown in Exhibit 1, and 15.9% for State Farm Fire and Casualty as shown in Exhibit 10.

Exhibit 1 summarizes the indication for State Farm Mutual and the information used to develop the indicated rate change. The data shown is developed from the exhibits that follow. Historical losses, premium, and expenses in these exhibits were adjusted prior to trend and development selections.

Exhibit 2A develops a credibility-weighted loss ratio by coverage.

Exhibit 2B shows the development of the weighted loss ratios by coverage.

The loss ratios are based on trended ultimate losses and Loss Adjustment Expenses (LAE) divided by trended current-level earned premium for a selected number of fiscal accident years. The data is trended from the midpoint of each fiscal accident year to the midpoint of the time the revised premiums are expected to be earned using two-step trending as discussed below under Exhibit 4.

The number of fiscal accident years used to weight each loss ratio is selected so that the cumulative claim count of the experience period is equal to or greater than selected credibility standards, or judgmentally selected, subject to a minimum of 2 fiscal years. That minimum provides a level of stability. Equal weighting is applied to each available fiscal year if the credibility standard is not met.

Exhibit 2C develops a complement of credibility by coverage by adjusting the permissible loss ratio for premium and loss trends during the prospective projection period.

Exhibit 3 shows the rate history.

Exhibit 4 details the selection of historical and prospective premium trends. The yearly trend percentages shown are determined by applying a regression to historical data.

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Data is trended from the midpoint of each fiscal accident year to the midpoint of the latest fiscal accident year using the selected historical trend percentage. The historically-trended data is then trended from the midpoint of the latest fiscal accident year to the midpoint of the time the revised premiums are expected to be earned using the selected prospective trend percentage.

Exhibit 5 details the selection of historical and prospective loss trends. The selected trends are then applied using the same procedures detailed under Exhibit 4. Additionally, fiscal accident year losses have been matched with the fiscal calendar year exposures that produced them. This adds stability to the calculated loss trends when exposures change over time.

Exhibit 6 shows the selection for Adjusting and Other (A&O) Expenses as a percentage of loss and DCC.

Exhibit 7 shows the selected provision used to adjust the comprehensive coverage losses to reflect an expected provision for catastrophic loss.

Exhibits 8A and 8B detail the fixed and variable expense selections, respectively. Selected fixed expenses are shown based on cost per policy and converted to a ratio to projected earned premium. Variable expenses are shown as a ratio to written premium.

Exhibit 9 details the selected provision for underwriting profit and contingencies

Exhibits 10 through 17 are the same rate indications support as described above, but for State Farm Fire and Casualty Company.

B. PRIVATE PASSENGER RATING PLAN CHANGES

The following describes the major changes associated with converting to the new rating plan.

Multiple Car Policy

A multiple car policy will be introduced, which is an industry standard. State Farm's current single car policy (9812A Idaho Personal Car Policy) will be replaced with a new multiple car policy (9812C Idaho Personal Car Policy). This will only apply to private passenger vehicles with personal, business or farm use. The new multiple car policy will have policy level and vehicle level coverages.

Policy level coverages are those that the customer carries a single limit and the coverage applies to each vehicle listed on the policy. Rates may vary by vehicle as well as by the number of vehicles insured. Policy level coverages include:

- Bodily Injury Liability Coverage
- Property Damage Liability Coverage
- Medical Payments Coverage
- Uninsured Motor Vehicle Coverage - Bodily Injury
- Underinsured Motor Vehicle Coverage – Bodily Injury
- Death, Dismemberment and Loss of Sight
- Total Disability
- Loss of Earnings
- Financial Responsibility

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Vehicle level coverages are those coverages that apply to a specific vehicle on the multi-car policy. This allows the customer to choose and customize coverage selections (e.g. deductibles). Vehicle level coverages include:

- Comprehensive
- Collision
- Emergency Roadside Service
- Car Rental and Travel Expense

Rate Section Rule Changes

Prior to this filing, the rate manual showed a variety of discounts and factor adjustments used to develop the final premium. In some cases, the criteria and rating rules to apply can be complex and require human intervention to determine the rate adjustments. Further, criteria may be based off of information that changes over time, which requires regular review and updates to customer information.

The rating plan changes described herein are designed to simplify the application of rating rules and processes used to price a policy. In some cases, we will use more granular customer information to determine price. This involves increased usage of customer and policy characteristics that will be embedded within the rating models.

As described below, revisions include replacing or eliminating various discounts or other rate section rules. The result of which means much of the private passenger rate manual section has been eliminated or replaced.

Driver Assignments – Currently, driver assignments and principal operators are used to reflect a driver's risk on the vehicle they primarily drive. With the new rating plan, we will no longer assign drivers and principal operators. Occasional operators will also not apply. All drivers will be specified at the policy level and the risk associated with the listed drivers will be reflected across all vehicles on the multi-car policy.

Base Driver Information and Vehicle Usage – The elements that make up the current Driver Adjustment Factors are either being eliminated as specific factors/discounts or the data underlying those elements moved to be used within the rating models.

Base Driver Factors and Usage Factors will be eliminated. In addition to driver assignments, marital status will no longer be used. The other elements of age, gender and vehicle use will be used differently and mostly reflected in the rating models.

Annual Mileage – Today, we rely on customer entered annual mileage to rate the policy. There are two categories: short annual mileage and long annual mileage (less/greater than 7,500 miles annually for personal/farm use and less/greater than 12,000 miles for business use). This process requires regular manual upkeep for the two rated mileage categories.

With the implementation of the new rating plan, the annual mileage of the vehicle will still be included in a customer's rate but we will no longer be collecting the expected annual mileage in the quote. Instead a third party report will be ordered that will provide annual mileage information or will be based on an annual mileage model. This change not only simplifies the quote process and eliminates the need for manual upkeep of mileage categories for thousands of customers, it provides additional price segmentation for annual mileage beyond the two price points used today for annual mileage.

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Inexperienced Operator Adjustment – Today an adjustment applies to the premium when a principal operator is 21 or older and has not been licensed for at least 36 months. The adjustment varies based on the length of time the driver has been licensed. With the new rating plan, we will not have a separate inexperienced operator adjustment. The driver's age and driving experience variables will be considered along with other characteristics within the rating models to determine the final premium.

Multiple Automobiles Discount – This discount applies today for a policy when two or more private passenger automobiles, used principally by persons residing in the same household, are insured with State Farm, and the individuals are related by blood, marriage, or adoption. This criteria requires manual maintenance over time of the makeup of a customer's auto household.

Currently, the base driver rating factor assumes the multiple automobiles discount applies, where an additive factor is used for rating a single automobile household. This factor will be eliminated, along with other driver adjustment factors.

The number of vehicles will still be used when rating a policy and the criteria applied will be simplified. There will no longer be an explicit discount and the premium adjustment will vary within the rating models based on the number of drivers and number of vehicles.

Steer Clear® Safe Driver Program – Today we offer a discount for assigned youthful drivers (under the age of 25) that have completed a given safe driving curriculum and have not had any at-fault accidents or violations for three years. The Steer Clear® Safe Driver Program will replace the Steer Clear® Safe Driver Discount, which will no longer be an explicit discount. Also, accidents and violations will no longer be considered to determine eligibility for the program. A curriculum will still be offered for teaching young drivers safe driving and completing the program will result in a reduction to premium.

Student Away at School Discount – We currently offer a discount for assigned drivers under the age of 25 who meet specific requirements, including residing at school more than 100 miles from home and driving their vehicle only when they are home during breaks from school. With the new rating plan, the Student Away at School Discount will be eliminated.

Good Student Discount – We currently offer a discount for assigned drivers under the age of 25 who meet certain requirements regarding scholastic records. With the new rating plan, the Good Student Discount will be discontinued.

Vehicle Safety Discount – This discount applies for 1994 and newer model year private passenger automobiles. The discount category is determined based on the vehicle's VIN or through a combination of the make/model/body style. We will continue to apply vehicle safety rating based on the same categories as used today. However, instead of it being an explicit discount it will be a rating factor, where qualifying vehicles can receive a premium reduction.

Passive Restraint Discount – The passive restraint discount is being removed from the rating plan. Today the discount is applied on 1993 and prior model years to the medical payments premium based on the presence of seat belts and/or air bags. Over time these features have become standard on vehicles.

Multiple Line Discount – This discount is applied today if the named insured on the rated auto policy is also a named insured or owner on another qualifying policy. The discount level depends on the specific type of qualifying policy and certain combinations thereof (e.g. Homeowner's policy and a PLUP policy).

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

With the implementation of the new rating plan this will no longer be an explicit discount. Customers will still receive the benefit of a lower premium when they purchase additional State Farm products. The premium reduction will vary within the rating models, where several lines of business can be considered simultaneously to determine the premium adjustment. Also, several additional policy types will be eligible for consideration in multiple line rating (e.g. Personal Articles Policy). Health policies will no longer be considered in multiple line rating, which makes up a small portion of the existing book.

Accident Record Rating Plan/Good Driving Discount – Today, State Farm Mutual policies consider the combination of accidents and tenure with the company to determine the adjustment to premium (discount or surcharge) within the Accident Record Rating Plan. Three levels of discounts can be achieved, based on whether 3, 6 or 10 years accident free *and* the policy is in force with State Farm. In addition, a Good Driving Discount is offered to new and short tenured policies that have not had any moving violations or chargeable accidents.

With the implementation of the new rating plan, the Accident Record Rating Plan and the Good Driving Discount will be discontinued. There will no longer be explicit claim and tenure related discounts, nor will there exist three discrete time period discounts related to being accident free.

Accidents and tenure with State Farm will still be considered in the determination of the premium. Granular information about a policy's claims experience will be used directly in the models to determine the adjustment to the rate. Additionally, the credit for tenure with State Farm will no longer be dependent upon being accident free. Separate vehicle and driver tenure rating factors will be introduced. This benefits the customer as they retain a credit for loyalty, even in the unfortunate event they have an accident. Similar to today, better claims experience and longer tenure with State Farm can result in lower premiums.

Standard Tier Automobile Rating (STAR) Plan – Today, in the State Farm Fire and Casualty Company, we utilize the STAR plan to rate policies based on their accident and violation history. A vehicle is rated with either the 3-STAR Discount, the 2-STAR Discount, or at the 1-STAR base rates. Driver record levels are then used to determine driver record charges based on driving experience, which are then applied to the base premiums.

With the implementation of the new rating plan the STAR plan will be discontinued. Violations will no longer be used in rating. Accidents will still be considered in the determination of the premium. Granular information about a policy's claims experience will be used directly in the models to determine the adjustment to the rate. Similar to Mutual, tenure factors will also be introduced. The elimination of STAR and driver record levels coupled with other changes streamlines our rating to be consistent across State Farm's companies.

Customer Rating Index (CRI) – We currently apply CRI models that use an insurance risk score and other rating variables to price both new and renewal business. With the implementation of the new rating plan the CRI models will be discontinued.

C. PRIVATE PASSENGER RATING MODELS

With this filing we are introducing several new rating models as well as updating a few existing models. The models apply to both new and renewal business for both State Farm Mutual and State Farm Fire and Casualty. The following provides more details.

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Rating Plan Design

The overall rating plan design can be divided into different types of models and rating rules. This includes component models which produce score values and models that produce values that directly affect rating. The following is a summary of each model used in the rating plan:

The following component models produce score values. Appropriate weights will be developed and applied to each of the component model scores before generating rating factors that will ultimately be used in the rating plan. An ensemble transformation step determines the weights to be applied.

Annual Mileage – When available, annual mileage is calculated from actual odometer readings. Otherwise, a predictive model will be used to determine the expected annual mileage of the vehicle. Annual mileage is input to the Policy Information Model.

Policy Information – The Policy Information model score is based upon information not included in the other component models, including vendor-supplied vehicle history report information, vehicle information, driver ages and miles driven, for example.

Prior Internal Coverage – The Prior Internal Coverage model score is based upon internal State Farm information about prior coverage. This model is specified as part of the Policy Information Model but is applied separately; new policies will use the Insurance History model score alone (due to the lack of internal State Farm coverage history) and then transition to use the Prior Internal Coverage model score.

Insurance History – New policies will use the Insurance History model score, which is based upon vendor prior insurance consumer report information.

Credit-Based Insurance Risk – Similar to what is used currently in the Customer Rating Index (CRI).

Loss History – The Loss History model score is based upon internal State Farm claim information as well as prior claim information from vendor consumer reports. Uninsured Motor Vehicle coverage will also use the Loss History model score.

The rate factors produced from this model score are all less than or equal to 1.000. As a result, the base rates have been established to recognize that rate factors will always be less than or equal to 1.000, with the average loss history rate factor being significantly less than 1.000.

The following models produce amounts or rate factors that directly affect rating:

Marginal Acquisition Expense Adjustment (MAEA) – This model results in an additive expense amount that is applied to the final premium.

Drive Safe and Save® – Similar to today, this is a telematics-based program.

Location Rating (GRID) – Similar to today, Geographic Rating Identification (GRID) based rating utilizes the residence latitude and longitude coordinates to determine the Location Rating Factors (LRFs) that will apply to a policy.

See below for more information on these component models.

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Rating Rules:

> This is a series of rules that take the relevant model output and create the final premiums. The rule set receives information from the ensemble transformation step and component models that directly affect rating. See the Private Passenger Rates and Factors section below for more details.

Location Rating Factors (GRID)

We are revising our Location Rating Factors (LRFs) for Bodily Injury Liability, Property Damage Liability, Medical Payments, Comprehensive and Collision coverages.

Additionally, the current LRFs were adjusted to reflect all of the other elements of the new rating plan changes.

Similar as is done today, the movement toward the indicated LRFs has been limited in the interest of rate stability. Please note that premium stabilization still applies after the limited LRF movement.

LRFs are applied to Private Passenger vehicles, Motorcycles, and Motor Homes.

Lastly, the Territory Rating Factors (TRFs) for Motorcycles and Motor Homes were updated to reflect the average LRF within each territory. TRFs are applied to Motorcycles and Motor Homes that do not qualify for location-based rating.

Drive Safe & Save® Discount

Today, we offer a telematics-based discount to customers who enroll in Drive Safe & Save. This uses annual mileage and behavior-based driving information to determine a discount that is applied to the premium.

With this filing we are making enhancements to the Drive Safe & Save Index model. Annual mileage will no longer be included in the discount calculation. Mileage will still influence the price but will be accounted for through the Policy Information model score. All policyholders will continue to receive a discount while participating in the Drive Safe & Save, which ranges from 1% to 40%. The participation discount will remain unchanged, at 10%.

Marginal Acquisition Expense Adjustment (MAEA)

MAEA model scores are used to adjust the premium for new business customers expected to have the shortest tenure. The MAEA models predict the propensity that a customer will lapse within each of the first two policy terms.

The MAEA models have been developed to predict lapse probability and to better reflect the expected fixed acquisition expense costs for these customers. The result is an additive expense amount that is applied to the final premium

D. PRIVATE PASSENGER RATES AND FACTORS

Base Rates

Base rates have been revised to achieve the overall changes by coverage shown at the beginning of this memo. The income effects of all the rating factor and model changes described in this filing were taken into consideration when developing revised base rates.

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Fixed Expense Constant

We are introducing flat fixed expense constant amounts by coverage. Today, base rates inherently reflect both indemnity and all expense costs, combined. Moving forward the expense portion of premium that is fixed will be separate from the remainder of premium, which varies based on coverage and/or exposure. Private passenger rating factors applied to base rates have been adjusted for the introduction of expense constants. Please see the rate manual for the expense constants by coverage.

Bodily Injury Liability (BI) and Property Damage Liability (PD) Rating

Under our current rating structure BIPD is packaged together in a singular premium. We are splitting the BIPD rate into separate BI and PD premiums for private passenger vehicles only. Other vehicle types will continue to be rated with packaged BIPD.

Rating factors that currently apply to BIPD combined have been revised to now apply to BI and PD separately. This change will have the following impacts to our current rating structure for private passenger vehicles:

- Increased Limit Factors: BI and PD limit factors were revised to reflect split coverage pricing based upon the rate level relationship of today's package limit factors.
- Combined Single Limit Factors: We will no longer show Combined Single Limit Factors for package BIPD coverage for private passenger vehicles. Rather, separate BI and PD rates will be developed and a 0.95 factor applied to reflect the reduced exposure that Combined Single Limits provides relative to split limits.
- Rating factors that currently apply to BIPD will now apply to BI and PD separately.

Revised Increased limits rating factors are shown in the rate manual. We are also adding $750,000, $3 million, $4 million, and $5 million BI limits as well as $2 million, $3 million, $4 million, and $5 million PD limits.

Model Year Factors

Model year factors for Comprehensive, Collision, Emergency Road Service and Rental Reimbursement have been adjusted toward indicated rate levels, along with updating to a base model year of 2026. Vehicle age rate factors for Bodily Injury, Property Damage and Medical Payments will be accounted for in the rating models. Please see the rate manual for the revised Model Year factors.

Insurance Rating Group (GRG/DRG) and Deductible Rating Factors

We are revising the Insurance Rating Group rate factors for Collision (GRG) and Comprehensive (DRG) coverages and physical damage deductible factors towards guidelines. The rate manual details the changes for combined DRG/GRG and deductible factors. We are also adding $5,000 and $10,000 deductible options for private passenger vehicles only.

Driver Tenure Factors

Driver tenure factors are being introduced. Rating for tenure with State Farm is no longer embedded within rating rules nor dependent upon claims experience. The rate factor reflecting the driver with the maximum State Farm tenure in the household will apply to the entire policy. Tenure factors apply to Bodily Injury Liability, Property Damage Liability, Medical Payments,

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Comprehensive, Collision and Uninsured Motorist Coverages. Please see the rate manual for details.

Vehicle Tenure Factors

Vehicle tenure rate factors are being introduced for Comprehensive and Collision coverages. Vehicle tenure will reflect how long a vehicle has been insured with State Farm on the policy. Please see the rate manual for details.

Insurance Risk Rate Factors

Insurance risk rate factors are being introduced which correspond to the component models that produce score values, as described above. The Ensemble step transforms the model scores to rate factors for Credit Based Insurance Risk, Insurance History, Loss History, Policy Information, and Prior Internal Coverage model scores. A separate rate factor table is generated for each of these component models and for each major coverage. The model factors and filed adjustments are combined to produce an Insurance Risk Rate Factor, as shown in the rating sequence that is used to determine the final premium.

Uninsured Motorist Coverage Changes

As a result of converting from a single car policy to a multi-car policy there will now be one policy-level premium for Uninsured Motorist Bodily Injury (UBI) and Underinsured Motorist Bodily Injury (WBI). The premium will vary based on the exposures on the policy by introducing an “exposure” rating factor. This factor depends on the number of drivers and vehicles on the multi-car policy, where the cost for each additional exposure increases at a decreasing rate Exposure factors will vary by company, with larger benefits for multiple vehicles in State Farm Fire & Casualty. The exposure factors are shown in the rate manual.

A claim free factor will be applied for UBI and WBI, as shown in the rate manual.

UBI and WBI increased limit factors are revised as shown in the rate manual.

Rates by geography have been introduced and will vary by county, as shown in the rate manual.

A credit based insurance risk model will also apply.

Several vehicle level characteristics (vehicle safety group, for example) will apply to UBI and WBI. All vehicles on the policy will be considered to determine a singular factor for the policy. Lastly, a multiple policy credit may apply in situations where there are two or more policies carrying UBI and WBI coverage.

Company Factors (formerly STAR)

The base rates in State Farm Fire and Casualty are based on relationships to the Mutual company base rates. With the elimination of STAR levels, we are introducing a single company factor, for each coverage. Based upon historical loss experience in State Farm Fire and Casualty, the new company relationships to Mutual are shown in the rate manual. The chosen factors also consider the customer impacts of collapsing the STAR factors to a single company factor.

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

Other Rating Factors

There are minor adjustments to other rating factors, mostly due to the introduction of the fixed expense constant by coverage. Please see the rate manual for detailed changes which include:

- Medical Payments limits factors and Car Rental and Travel Expense limits.
- Liability Rating Group factors for Bodily Injury Liability and Property Damage Liability Coverages.
- Vehicle Safety Group factors for Medical Payments and Uninsured Motorist Coverages
- Farm Factor for Vehicle Use (adjusted from 0.85 to 0.80)

Other Coverages

Rates and factors have also been revised for the following coverages. The revisions have a negligible rate impact. Refer to the rate manual for the rates and factors.

- Transportation Network Company and Transportation of Friends
- Use of Non-Owned Cars
- Auto Death Indemnity and Specific Disability (S)
- Loss of Earnings (Z)

E. PREMIUM STABILIZATION

A "Final Coverage Premium" rule will be introduced. Considering the significant revisions to the rating plan the changes could result in large price swings for existing customers. This premium stabilization rule will apply in order to mitigate customer rate impacts.

The premium stability caps for Idaho, by coverage apply as follows:

Bodily Injury, Property Damage, MPC, Comprehensive, Collision, UBI* & UPD		
Indicated Rate Change	**First Term Cap**	**Subsequent Term Cap**
< - 75%	-10%	-25%
- 75% to - 50%	- 7%	-20%
- 50% to - 25%	- 5%	-15%
- 25% to - 15%	- 5%	-10%
- 15% to - 10%	- 5%	- 7%
- 10% to 0%	- 5%	- 5%
0% to + 10%	+ 5%	+ 5%
+ 10% to + 15%	+ 5%	+ 7%
+ 15% to + 25%	+ 5%	+10%
+ 25% to + 50%	+ 5%	+15%
+ 50% to + 75%	+ 7%	+20%
> + 75%	+10%	+25%

**Note: Uninsured and Underinsured Motorist Bodily Injury First Term Cap is 0%, subsequent terms use the table above.*

All Other Coverages	First Term Cap	Subsequent Term Cap
Emergency Road Service	+/-20%	+/-50%
Rental Reimbursement	+/-20%	+/-50%
Death, Dismemberment, Loss of Sight	Unlimited	Unlimited
Total Disability/Loss of Earnings	Unlimited	Unlimited

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

**Note: Subsequent term caps apply through the 6th renewal term, with the remainder of the ultimate rate adjustments applying at the 7th renewal term.*

In general, stabilization will apply where State Farm has changed the rate, factor or model for existing customers. Items not stabilized include customer selections (e.g. deductible, limits), characteristics that age over time (e.g. driver age), or adding/removing claims and discounts.

The prior term premium will be adjusted to reflect characteristics not subject to stabilization. Next, a rate stability factor is then applied to the premium to move toward the indicated ultimate premium level. This calculation is done separately for each coverage and vehicle.

For all transactions that are effective mid-term, other than those in which a vehicle is moving from the 9812B policy to the 9812C policy, the rate stability factor is 0%.

Refer to the rate manual for additional details.

F. MISCELLANEOUS VEHICLES

We are revising the factors and rates by coverage for miscellaneous vehicles, resulting in the following combined companies overall rate changes:

Vehicle Type	% Rate Change
Antiques	0.0%
Classics	0.1%
Motorcycles	6.4%
Motor Homes	0.0%
Off-Road Vehicles	-14.0%
Private Passenger Trailers	-10.3%
Travel & Camping Trailers	0.0%

We are revising rates and factors for antiques, classics, motorcycles, motor homes, private passenger fleets and named non-owner so that each vehicle type has their own rating factors rather than using private passenger rates and factors.

G. ADDITIONAL FILING REQUIREMENTS

The following enclosed attachments are provided to meet the remaining filing requirements.

Rate Manual – The enclosed rate manual has additional details. Please note, our rate manual displays more than just private passenger vehicle types. Other than the changes described herein, there are no rating plan changes to other vehicle types with the exception of needed editorial changes.

Exhibit 18 illustrates our compliance with Idaho Code Section 41-1843 per previous discussions with the Department of Insurance and Bulletin 12-01. This exhibit demonstrates that the premium calculated using the minimum Credit factor for Idaho insureds is equal to or greater than one half the premium calculated using the highest possible Credit factor (i.e., the highest rate based on credit).

We have also included Exhibit 19 as a 3-year rate history and Exhibit 20 as a range of policyholder premium changes. Exhibit 21 provides loss ratios based on 5 years of Idaho

©, Copyright, State Farm Mutual Automobile Insurance Company 2026
No reproduction of this copyrighted material allowed without express written consent from State Farm®

earned premium and actual loss data. Exhibit 22 provides a breakdown of policy characteristics for those seeing an increase above 15%.

I certify that the submitted rates are fully compliant with Idaho law and rules and are not inadequate, excessive, or unfairly discriminatory.

Sincerely,

Adam Swope
